

Project Design Phase-II

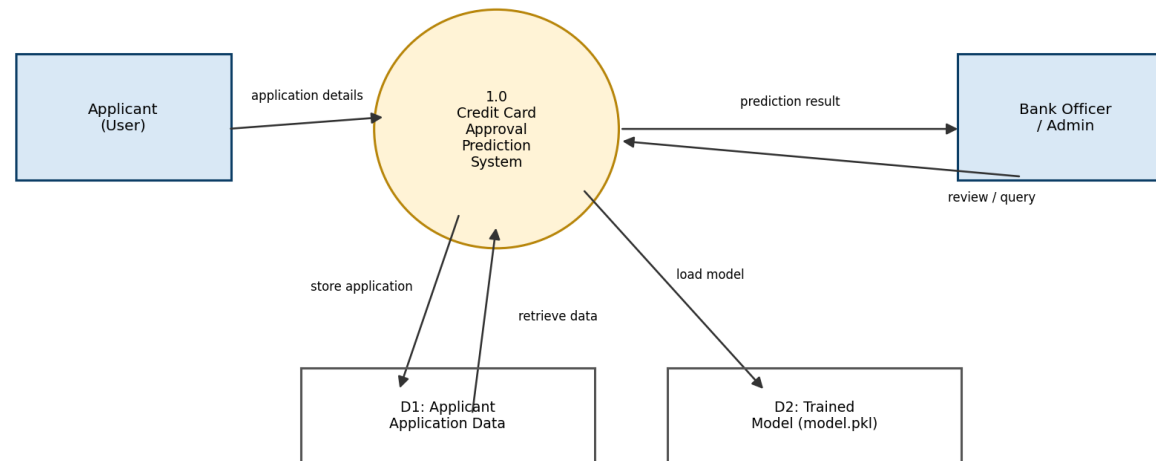

Data Flow Diagram & User Stories

Date	11 July 2026
Team ID	SWTID-2026-9508
Project Name	Credit Card Approval Prediction System
Maximum Marks	4 Marks

Data Flow Diagram:

The diagram below shows how applicant data flows through the Credit Card Approval Prediction System - from the applicant, through the prediction process, to the stored application data and trained model, and finally to the bank officer / admin who reviews outcomes.

DFD Level 0: Credit Card Approval Prediction System

User Stories:

Use the below template to list all the user stories for the product.

User Type	Functional Req. (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Applicant (Web user)	Application Submission	USN-1	As an applicant, I can enter my demographic and financial details in a web form to apply for a credit card.	Form accepts valid input and shows an error message for missing/invalid fields.	High	Sprint-1
Applicant (Web user)	Application Submission	USN-2	As an applicant, I can submit my completed form to receive an approval prediction.	Submission triggers the prediction pipeline and shows a result page.	High	Sprint-1
Applicant (Web user)	Prediction Result	USN-3	As an applicant, I can view whether my application was Approved or Rejected immediately after submitting.	Result page clearly displays Approved / Rejected status.	High	Sprint-1
Bank Officer (Admin)	Model Training	USN-4	As a bank officer, I want the system to be trained on historical applicant data so predictions reflect real approval patterns.	Model is trained on the dataset and evaluation metrics are logged.	High	Sprint-2
Bank Officer (Admin)	Model Evaluation	USN-5	As a bank officer, I want to see which ML model performs best so I can trust the deployed prediction.	Comparison table of Accuracy, Precision, Recall, F1-Score across models is available in documentation.	Medium	Sprint-2
Bank Officer (Admin)	Error Handling	USN-6	As a bank officer, I want the system to handle invalid input gracefully instead of crashing.	Invalid or missing form fields show a clear error instead of a server error.	Medium	Sprint-2
