

Project Demonstration Communication

Date	11 July 2026
Team ID	SWTID-2026-9508
Project Name	Credit Card Approval Prediction System
Maximum Marks	2 Marks

Purpose:

This document outlines how the team communicated internally throughout the project, and how the team will communicate the solution clearly to evaluators during the final demonstration.

Internal Team Communication Plan:

Communication Type	Participants	Frequency	Channel	Purpose
Daily Progress Updates	Team Members (Internal)	Daily (during active sprint days)	WhatsApp / Chat	Quick status check: what was completed, any blockers
Sprint Review	Whole Team	End of each sprint (every 6 days)	Video Call	Review completed backlog items, demo working code, plan next sprint
Code Integration Sync	K Akshaya reviews with Naveen Kumar Kayala & Manogna Reddy	Before merging to main branch	GitHub Pull Request comments	Review notebook/model changes (Naveen, Manogna) and Flask app changes (K Akshaya) before merging into main
Progress Reporting	K Akshaya (Team Lead) → SmartBridge Mentor	Weekly	SkillWallet / Email	Report overall project status against the plan

Communication Plan for Final Demonstration:

- **Clarity over jargon:** explain the problem (slow, inconsistent manual credit approval) before diving into the technical solution, so non-technical evaluators can follow.
- **Show, then explain:** lead with a live demo of the working Flask app, then walk through the model comparison and architecture that made it possible.
- **Structured narrative:** follow the natural project arc - Problem → Data → Model → Application → Results - matching how the repository itself is organized.
- **Anticipate questions:** be ready to explain why XGBoost was selected (highest F1-Score), how missing data was handled, and why F1-Score was prioritized over raw Accuracy in a credit-risk context.
- **Team-based delivery:** each team member communicates the section they were most involved in building, so questions can be answered with first-hand detail (see Team Involvement in Demonstration.pdf).
